**Small Mammals in the Diet of Largemouth Bass, Revisited**

ABSTRACT

We studied diet of largemouth bass (Micropterus salmoides) from four small, nutrient limited, kettle lakes in Michigan's Upper Peninsula near Land o' Lakes, WI, from 1980-1994. We collected stomach contents from 4,846 individual live bass. Although six different species of small mammals were recorded, small mammals were not common in the diet; frequency of occurrence (FO) in the diet was only 0.29% over the duration of the study.
